9. [Notifications & activity](#)
0. [Admin workflow](#)

1. Admin overview

- **What this page is about**

This section explains what an **administrator** does on PMTwin. Admins help keep the platform organized, safe, and easy for members to use.

- **What you can do here**

- Understand how your role fits into day-to-day operations.
- See which areas you will manage most often (people, posts, and follow-up).

- **Admin Actions**

 Admin Actions

1. Sign in with your administrator account.
2. Open the **Admin** area from the main navigation.
3. Skim the menu so you know where users, opportunities, matching, deals, and contracts live.

- **What happens next**

You are ready to work through the admin screens in order, or jump to any topic from the table of contents.

Remember:

Admins manage users, opportunities, and platform activity. You review and guide what appears on the platform—without doing the work of a normal member account unless your organization asks you to.

2. Admin dashboard

Figure 1 — Admin dashboard showing system activity and key metrics

- **What you are seeing**

- The main admin home: summary cards and overview of platform activity.
- Quick paths in the layout or menu to Users, Opportunities, Matching, Deals, and Contracts.
- Headline numbers you can scan at the start of a review session.

- **What this page is about**

The **dashboard** is your first stop after you open the Admin area. It gives a simple picture of what is happening on the platform.

- **What you can do here**

- View headline numbers and activity.
- Spot items that may need attention.
- Move quickly to other admin pages from the menu.

- 🖱️ **Admin Actions**

Admin Actions

1. Open
Admin
, then
Dashboard
(or the home admin page your menu shows).
2. Review the key numbers at a glance.
3. Use the menu to go to
Users
,
Opportunities
,
Matching
,
Matches
,
Deals
, or
Contracts
when you need detail.

- **What happens next**

You get a quick understanding of platform activity and can drill down wherever you need to.

- **Tips**

- Visit the dashboard at the start of your shift to set priorities.

3. User management

Figure 2 — User list for searching, opening profiles, and updating account status

• What you are seeing

- The searchable list of people and companies on the platform.
- Row actions or links to open a user and review details.
- Status or columns that help you find who needs approval or follow-up.

• What this page is about

Here you see **people and companies** who use the platform. You can review new sign-ups, check profiles, and update account status when your process allows it.

• What you can do here

- View and search users.
- Approve or reject accounts that are waiting for review.
- Open a user to read or edit details.
- Use a **pending review** or **vetting** view, if your menu includes it, to work through the queue faster.

• 📌 Admin Actions

Admin Actions

1. Open

Users

(or

User management

) from the Admin menu.

2. Find the person or company you need, or open the pending list if available.

3. Select a user to open the detail view.

4. Choose

Approve

,

Reject

, or

Edit

, following your organization's rules.

• What happens next

The user's status updates and their access changes right away, in line with your choice.

• Tips

- Approve only profiles that look complete and trustworthy.
- If something is unclear, use your internal process before you approve.

4. Opportunities management

Figure 3 — Opportunities overview for reviewing and moderating member posts

• What you are seeing

- All member opportunities in one table or list, often with filters.
- Ways to open a post and read the full description and details.
- Actions to edit or remove content when it does not meet your guidelines.

• What this page is about

Opportunities are posts where members describe what they need or what they offer. Admins make sure content stays clear, fair, and appropriate.

• What you can do here

- View all opportunities.
- Open a post to read the full text.
- Edit or remove content that does not meet your guidelines.

• 📌 Admin Actions

📌 Admin Actions

1. Open **Opportunities** from the Admin menu.
2. Select an opportunity to review.
3. Read the title, description, and any attached details.
4. If needed, edit the post or remove it using the actions on screen.

- **What happens next**

The opportunity is updated or taken off the platform, and members see what your rules allow.

- **Tips**

- Focus on clarity, respect, and policy—small fixes often help more than removals.

5. Matching (admin command center)

Figure 4 — Admin Matching: preview report, metrics, and per-row Save for published opportunities

• What you are seeing

- **Summary metrics** — Saved matches, invitations sent, applications from invitations, and replacement activity when shown.
- **Run report** — A preview of current suggestions across published posts (scores and types).
- **Save** on a published opportunity row — Writes suggestions to member accounts and sends notifications.
- **Work queues** — Short lists (for example stuck matches or recent invitations) to prioritize follow-up.

• What this page is about

The **Matching command center** lets you inspect how suggestions are built and, when needed, persist them for members. Matching also runs automatically when a member **publishes** an opportunity—you use this screen to preview, verify, or save again for a specific post.

Preview vs Save:

Run report

shows results in memory only—it does

not

create matches for members. Use

Save

on a

published

opportunity row when your process requires persisting suggestions and notifying participants.

- **What you can do here**

- Run a report to preview one-way, barter, consortium, and circular-style suggestions.
- Save matches for a published opportunity when preview results look correct.
- Scan metrics and queues for invitations, replacements, or items needing attention.

- **Admin Actions**

 Admin Actions

1. Open

Admin

→

Matching

.

2. Click

Run report

to refresh the preview (no member records are created yet).

3. Review scores, match type, and participants for each row.

4. For a

published

opportunity that needs persisted suggestions, click

Save

on that row.

5. Check metrics and work queues if members report missing or duplicate suggestions.

- **What happens next**

After **Save**, members see new or updated suggestions on **Matches** and may receive notifications. After **Run report** only, nothing changes for members until you Save or they publish again.

- **Tips**

- Prefer fixing unclear opportunities before repeatedly saving the same post.
- Treat Run report as a quality check; use Save only when you intend members to see those suggestions.

- **Common mistakes**

- Assuming Run report created matches for members—it is preview only.

- Trying to Save on a draft opportunity—Save is for published posts.
- Expecting bulk Save for every row at once—persist is per opportunity row.

6. Matches monitoring

Figure 5 — Matches list for tracking suggested collaborations and their status

• What you are seeing

- A list of match rows with parties, scores or fit labels, and status (pending, confirmed, or declined).
- A way to open one match to see participants and progress in full.
- Filters or sorting, when shown, to focus on new or stuck items.

• What this page is about

A **match** is a suggested collaboration between members. This page is for **watching progress** across many matches, not for running the matching tool itself.

• What you can do here

- View the list of matches.
- See status and who is involved.
- Open a match for more detail when you need to support someone.

• 📌 Admin Actions

📌 Admin Actions

1. Open **Matches** from the Admin menu.
2. Scan the list for names, dates, or status words your team cares about.
3. Click a match to open the full view.
4. Review participants and where the match stands.

- **What happens next**

You understand how matches are moving and can answer questions or step in through your normal support channels.

- **Tips**

- Use this list together with the dashboard when you track busy periods.

7. Deals monitoring

Figure 6 — Deals overview for monitoring active collaborations and stages

• **What you are seeing**

- Deals listed with title, parties, and stage or status.
- Links or buttons to open a deal and read scope and next steps.
- Signals that help you spot deals that need a gentle nudge or support.

• **What this page is about**

A **deal** is where members move from a match into real planning and delivery. Admins use this view to **follow progress** and help when something stalls.

• **What you can do here**

- View deals in one place.
- See stage or status for each deal.
- Open a deal to read scope, parties, and next steps.

• **Admin Actions**

 Admin Actions

1. Open **Deals** from the Admin menu.
2. Select a deal from the list.
3. Review the status and the people involved.
4. Use the information to support members or escalate through your team if needed.

- **What happens next**

You can track deal progress and help keep work moving smoothly.

- **Tips**

- Pair this view with contracts when you check whether signing is complete.

8. Contracts monitoring

Figure 7 — Contracts list for checking agreements and signing progress

• What you are seeing

- Contracts with titles, parties, and current status.
- Which step signing is on, when the screen shows it.
- Paths to open a contract for the full text and history.

• What this page is about

Contracts record the formal agreement between parties. Admins check that documents move through signing in an orderly way.

• What you can do here

- View contracts and their status.
- See who still needs to sign, when the screen shows it.

• Admin Actions

Admin Actions

1. Open **Contracts** from the Admin menu.
2. Select a contract.
3. Review the status and any signing steps shown.

• What happens next

You know whether agreements are finished or still in progress, and you can guide members if your role includes that.

- **Tips**

- Always follow your organization's legal and compliance rules when you discuss contracts with users.

9. Notifications & activity

Figure 8 — Notifications and recent updates relevant to your work

• **What you are seeing**

- A chronological list of alerts, mentions, or system messages.
- Short summaries and links to the related user, opportunity, deal, or contract.
- Filters or tabs, when available, to focus on unread or recent items.

• **What this page is about**

Here you stay aware of **what changed recently**: alerts, messages, and a simple history of important events when your product includes it.

• **What you can do here**

- Read notifications meant for administrators.
- Scan recent activity or an activity list, if your menu shows one.
- Use filters or dates when the page offers them.

• 📌 **Admin Actions**

Admin Actions

1. Open

Notifications

or

Activity

from the Admin menu (names may vary slightly).

2. Read new items first.

3. Follow any link on screen to the user, opportunity, deal, or contract it refers to.

• What happens next

You catch up on changes without checking every screen by hand.

• Tips

- Make a short daily habit: dashboard, then notifications or activity, then deeper pages as needed.

10. Admin workflow

Figure 9 — Admin workflow: Users, Opportunities, Matches, Deals, and Contracts

- **What you are seeing**

- A simple left-to-right map of where admin work fits: starting from **Admin**, then **Users**, **Opportunities**, **Matches**, **Deals**, and **Contracts**.
- Each box matches a main area in the admin menu when you need to drill in.
- Use this picture when you explain the journey to others or plan your own reviews.

- **What this page is about**

This section ties the admin journey together. On PMTwin, work usually flows from **people and their posts** to **suggestions**, then to **deals** and **contracts**. As an admin, you often follow the same order when you review or support members.

- **What you can do here**

- See the big picture: users → opportunities → matches → deals → contracts.
- Use the diagram at the top of this section as a map when you train others or explain your day.

- 📌 **Admin Actions**

📌 Admin Actions

1. Start with **Users**
when accounts or trust are the issue.
2. Move to **Opportunities**
when the question is about a post.
3. Check **Matching**
(Run report / Save) and **Matches**
when suggestions are in doubt.
4. Open **Deals**
and **Contracts**
when work or signing needs attention.

- **What happens next**

You handle most admin tasks in a clear order, without jumping around unless the situation calls for it.

- **Tips**

- Keep this flow in mind: fixing an account issue early often prevents confusion later in deals and contracts.
